

GitLab Projects:-Documentation Format

1. Folder Structure

1. Hardware Projects:-

- 1. Documentation**
- 2. Design File(PCB / CAD)**
- 3. Firmware/Software**
- 4. Bill of Materials (BOM)**
- 5. Images**
- 6. Licenses**

2. Software Projects

- 1. Documentation**
- 2. Software**
- 3. Dependencies**
- 4. Images**
- 5. Licenses**

3. 3D_Design

- 1. Documentation**
- 2. Design Files**
 - a. CAD_Models/STL_Models**
- 3. Renderings**
- 4. Images**
- 5. Measurements**
- 6. Specifications**
- 7. Licenses**

2. Project Name:- Format

- Lowercase naming convention
- Separate words using an underscore.
- Examples
 - [BoardName]_[technology]_[ProjectName]_[version]
 - [BoardName]_[version]
 - [ProjectName]_[version]

3. Readme.md FILE Format:-

- **Project Name**

This section typically includes the name of your project. Ensure it's clear and directly reflects the purpose of your project.

- **Project Summary**

Provide a summary describing the primary goal or purpose of the project. It should give users a quick understanding of what the project is about.

- **Features**

List out the specific features or functionalities that the project offers. Bullet points or a list format can make it easy to scan and understand.

- **Prerequisites**

Outline any prerequisites that users need to have or install before using your project. Include software, dependencies, or hardware requirements.

- **Getting Started**

This section should provide clear instructions on how to get started with your project. Include installation guides, setup procedures, and basic usage examples. Linking to detailed guidelines or a separate file for more detailed instructions could be beneficial links to [setup.md](#)

- **Contribution**

Explain how others can contribute to the project. Provide guidelines for contributions, including information on how to submit issues, feature requests, or pull requests link to [contribution.md](#)

- **Licensing**

License name and link to license file

- **Acknowledgements**

Acknowledge any resources, tools, or individuals who contributed to your project's development. This section is a way to show appreciation for any third-party resources or references.

- **Troubleshooting**

Information regarding the bug and the approach to addressing the issue.

- **Changelog:** Changes in releases link to [changelog.md](#) file

Documentation Format:-

The documentation comprises a milestone tracker detailing the R&D efforts undertaken for the development of the specific project. This information is designed to assist individuals referencing the file. Additionally, the documentation includes datasheets about the sensors used in the hardware projects.

Contents

1 Summary

2 Problem definition and background

2.1 Literature review

2.2 Reference solution

3 Design

3.1 Architectural Overview

4 Implementation

4.1 Hardware

4.2 Electrical Connections

4.3 How it Works

4.4 Firmware

4.5 Testing

5 Results

5.1 Test

6 Conclusions

7 Bibliography
